TIMELESS HARMONY

INSPIRATION

TRANQUILITY

With an increased focus on **well-being and self-care**, we have revealed an intense need to reduce our pace of life. It has become clear to us how much of an impact the spaces in which we live have on our **mood**. Similarly, interior and kitchen design have been massively influenced by this new reality we are all experiencing.

Straight-grained oak in natural shades is trending. They are soft on the eye and enable the various elements that make up the kitchen to fit together. Placing the wood horizontally, with the grain running from one door to the next, is still popular and worthy, but the technical difficulty creates a certain level of aversion. That is why a serene straight-grained oak design like Lecer facilitates this style of application, with a result that is both balanced and harmonious. Likewise, white continues to have a favoured role in the kitchen, here it provides warmth in a matte finish.

Beneath this luminous kitchen, there lies a simple, **functional composition** in which the decorative materials find their inspiration in nature, while fitting in perfectly with the living room furniture. Thus, a space is created that fills us with serenity and a calm peacefulness.

Wellness and relaxation are achieved through materials that bring Mother Nature into our home in neutral shades using soft, linear woods.

#linear woods
 #neutral shades
 #matte finish
 #nature
 #harmony and serenity

01. **Lecer Boreal**: a very serene straight-grained oak wood design in natural shades with a deep yet smooth texture that is pleasant to the touch, reminding us of freshly cut natural wood veneers.

02. **Blanco LBE Extra Balm**: a very neutral, deep white that adds brilliance to any type of kitchen, featuring a warm matte texture.

03. **Cashmere Technical Matt**: a shade of beige in an anti-fingerprint ultra-matte finish that is highly resistant to the daily bump and grind that affects horizontal components such as dining tables. This material is certified for horizontal and vertical usage.

BACK TO BASICS

INSPIRATION

RESTORATION

History is full of epochs marked by **rising trends**, the current period is no exception: we find ourselves reflecting on the past and the quality of life in the villages and small towns. This kitchen takes its inspiration from the high-quality materials that were once the key elements in building house and home: the **Gris Claro** Technical Matt hue takes its cue from the stone used for the walls, both the shade and the wear factor, while the **Solpor** design is reminiscent of rustic oak roof beams, providing the room with warmth and solidity. The result is a modern, functional kitchen that is in tune with traditional architecture from thereabouts.

**We look to the past from
the perspective of
contemporary design to
bring together the best of
both eras in a single space.**

INSPIRATION

#contemporary rustic

01. **Solpor** Rock & Roll: a rustic oak wood design with elegant figuring and a light grey finish that combines beautifully with the fashionably neutral tones of the kitchen world. The Rock&Roll finish provides a rugged surface, showcasing the rustic nature of this design, and a matte effect.

02. **Gris Claro** Technical Matt: a luminous shade of cold grey in an anti-fingerprint ultra-matte finish that is highly resistant to the daily bump and grind that affects both horizontal components and doors in the kitchen. This material is certified for horizontal and vertical usage.

ITALIAN GRAVITAS

INSPIRATION

COME TOGETHER

Covid restrictions had left many of us missing friends and family whilst trying to stay safe. That is why this desire to reconnect with life as we knew it is making us feel nostalgic. By contrast, in a glow of positivity, we have rediscovered the joy of having people over and this has converted the kitchen into the nerve centre of all that is **socialising at home**.

This kitchen has been designed thinking about the importance of having a functional space to cook without missing out on the opportunity to interact with our family and friends. Inspiration comes from the influence of Italian design, where **smoky elegant wood** interplays with sculpted marble and champagne overtones. The result is a kitchen that is at once nostalgic yet elegant and full of gravitas, a place where time slowly wends its way past.

#linear woods
#elegant metal design
#anti-fingerprint matte
#classically austere
#contemporary nostalgia

01. **Sumun Rock & Roll**: a design in smoky eucalyptus with a frisé effect featuring flecked golden hues that blends perfectly with the rugged feel and matte finish of the Rock&Roll texture. The 22 mm support board provides robustness to the door and greater ergonomics to use J-shaped pull handle profiles.

02. **Champán Metalizado Ideal Matt**: a brushed metal effect design with anti-fingerprint matte finish in a very elegant august champagne tone.

03. **Mármol Blanco Technical Matt**: a distinctly Italian luminous marble design, whose character is visible through the grey veining running through the structure.

The kitchen retains its place as the beating heart of the house, a space that is home to the finest conversations in the very best company.

INDUSTRIAL HOUSEHOLD

INSPIRATION

TECH

The kitchen is one of the key driving forces in terms of innovation in the development of new materials and technologies linked to improved the quality of home life. However, an excess of technological devices around us, particularly screens, make us seek out greater **tactility in the materials** with which we surround ourselves. Meanwhile, one of today's key issues is ensuring good hygiene, especially in a place that features as much foot traffic as a kitchen does.

#black kitchen
#hypertextures
#customisation
#industrial
#tech

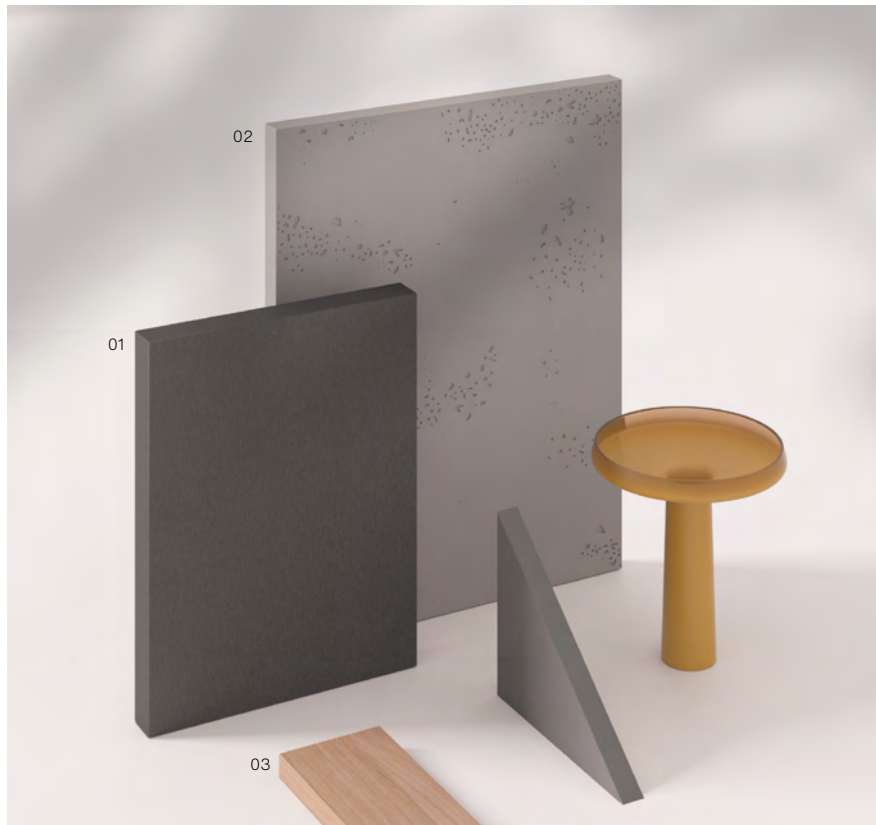

**Functionality in its
essence, featuring materials
that suggest professional
kitchens but without
losing their quintessential
homely nature.**

01. **Titanio Tambo** Ideal Matt: a brushed metal effect design with an anti-fingerprint matte finish in shades of titanium for character and elegance.

02. **Cemento TEX**: a hypertexture that mimics a concrete surface. In this case a grey lacquer has been used to simulate the colour of the cement itself, however it lends itself to the imagination and know-how of the lacquer expert.

03. **Roble Alba**: a certified wood veneer made from European oak. The serene structure sees straight-grain interweave with half-figured sections to create a sense of movement. The initial hue is light and clear, but the varnish or oil used will mean that customisation is only a tone away.

The use of anti-fingerprint, joint-free and antibacterial materials gives us peace of mind. In this composition we are proposing a space that reminds us of professional kitchens in which **metallic finishes** and industrial style are the protagonists. In addition, the use of **MDF TEX** enables us to enjoy the tactile sensation provided by the hypertexture, which mimics cement yet is derived from a wood-based material. The natural veneer used in small details adds warmth and makes the space homely, much needed at this time.

LITTLE DASHES OF COLOUR

VERSATILITY

The need to generate spaces where numerous activities take place has sped up. Kitchens that are hidden away behind large closets allow us to visually **organise** rooms where other activities can occur, such as sports or working from home.

The rustic oaks continue to occupy a pre-eminent spot, but here they are more relaxed and elegant as they create spaces that abound with serenity. This kitchen has been designed using a combination of a **rustic wood veneer** and a deep blue. Dark blues and greens, single colours, are very trendy. Little dashes of primary colours add that refreshing touch of **positivity** to a room.

#natural rustic veneer
 #deep blue
 #flexible spaces
 #functional visual
 #positivity

01. **Azul Ceylan Technical Matt:** very dark blue in a highly resistant anti-fingerprint ultra-matte finish. This material is certified for horizontal and vertical usage.

02. **Roble Country:** a certified wood veneer made from oak. Featuring a smooth rustic structure combining sections of straight-grain with half-figuring, knots and the odd fissure. The initial hue is light and clear, but the varnish or oil used will mean that customisation is only a tone away.

The boundaries between spaces are blurred, while the use of colour fills us with positivity and hope.

NEW NEUTRALS

INSPIRATION

TOTAL LOOK

Continuing with the theme of the impact of the pandemic on our new way of living, we must highlight the need to have space so our basic necessities can be **stored** away properly. That is why large vertical cupboards have become a key part of the kitchen, taking on this role without leaving aside their aesthetic quality.

INSPIRATION

#black kitchen
#anti-fingerprint matte
#stone-block
#industrial
#glam

**Decorative styles are not hermetic;
here they complement each other,
multiplying the effect to give this
kitchen an even more glamorous result
than either individually would.**

01. **Mármol Hades** Technical Matt: a design using black Marquina-style marble and featuring white veining in quartz, with an anti-fingerprint ultra-matte finish and certified for horizontal usage. It allows us to create a variety of the so-called total look compositions, with anti-wear fully guaranteed against intense front and horizontal surface usage.

02. **Aluminio Cava** Ideal Matt: a brushed metal effect design with an anti-fingerprint matte finish in a stainless steel colour for extra shine.

The design of this kitchen seeks to transfer the essence of the total look used in this sculptural island through a décor that imitates the elegant Marquina marbles with its anti-fingerprint, **ultra-matte finish**. We contrast and add light using a metallic effect design in a warm shade of grey, also in anti-fingerprint matte, for the columns in the back, which allows the metallic effect of this material to reflect all the light entering through the window. We connect this area with the island and the glass cabinet using a matte black aluminium front with integrated handle.

RE- CONNECTING

INSPIRATION

TACTILITY

Now is the heyday of all that is locally-sourced including contemporary handicrafts. This environmentally respectful age combines the beauty of handmade with **technological innovation** and the ease of access to what is locally sourced.

This timeless, restrained proposal brings together the three focal points of this trend: cutting-edge tech, the value of the handmade and respect for locally-sourced products. **Nogal Mojave** is a certified natural wood veneer and the selection and composition of the layers is done by hand with care and attention to detail. The process concludes and gives it a very deep ribbed **hypertexture** revealing beautifully slender, sinuous shapes.

#hypertexture
#natural wood
#anti-fingerprint matte
#translucency
#hi-end materials

Here comes a touch of light, inspired by the warmth of the sun, with the **Beige** Topglass Matt design, an innovative material that emulates the effect of acid-etched glass but is far lighter and more resistant.

01. **Nogal Mojave**: a serene, straight-grained slatted walnut design, created to work perfectly in kitchen composition featuring repeating large groups of columns. The Mojave hypertexture emphasises the linearity and lightness of this beautiful natural veneer design.

02. **Beige** Topglass Matt: a design featuring a warmly luminous beige, with an anti-fingerprint ultra-matte finish plus acid-etched glass effect. The effect is translucent to the eye, something that the mild chamfer of its surface makes visible. It is velvety to the touch.

Progress through technological innovation without losing sight of the inherent value in the handmade and local.

INSPIRATION

CULTURAL FUSION

INSPIRATION

A JOURNEY WITHIN

Another of the great changes we have undergone recently is the inability to move around freely, to travel and **connect** with other places, other people. With this kitchen we are seeking to break down borders. Two styles that are very different one from the other have blended together perfectly: the functionality of Scandinavian style in conjunction with the values of Japanese design. The result is a kitchen that lets us **travel** by way of touch and sight.

INSPIRATION

01. **Roble Fuji**: a slatted, straight-grained oak design that, combined with the Fuji hypertexture, creates the effect of a new textile material.

02. **Blanco Pure** Topglass Glow: a timeless design in a neutral white, featuring a gentle warm undertone that makes any space homely and full of light. The shiny tempered glass effect is achieved using Topglass technology, which has an excellent refractive index.

03. **Verde Glencoe** Technical Matt: a deep green with mild grey undertones to refresh your kitchen. It has an anti-fingerprint ultra-matte finish and is certified for both horizontal and vertical usage.

#hypertexture
#natural wood
#shiny tempered glass effect
#brightness
#hi-end materials

INSPIRATION

The composition of this kitchen transports us to remote places thanks to its materials and its colours.

Roble Fuji combines simple, neutral straight-grained oak with a hypertexture to produce an intense surface. The resemblance to a natural fabric is there both to the touch and the eye. The kitchen is made into a refreshing, lively space by way of the contrast from the Verde Glencoe **Technical Matt** (ultra-matte and anti-fingerprint). It is finished off with the tempered glass effect of the **Topglass Glow** finish in Blanco Pure, making it timeless and luminescent. A clear example of how matter changes according to texture.

MATERIALS

Below is our specialised selection of materials for kitchen doors: a wide variety of coatings inspired by current industry trends.

We have combined designs and finishes with the most suitable baseboards to obtain the best surface quality, good machining and extend the useful life of the fittings. All of this without forgetting the importance of sustainability and hygiene, by certifying our materials.

INTENSE TEXTURES

↑ SOLPOR

MELAMINE **R&R**

HOT NOW: MILDLY
RUSTIC OAK

Rustic yet elegant structures with a sense of movement, featuring figuring and some fissures (though not to excess).

R&R FINISH

It provides a rugged surface, showcasing the rustic nature of this design, and a matte effect.

↑ WEIMAR

↑ SUMUN

↑ TOTAL BLACK

TRENDY EUCALYPTUS

The same design in three different shades: stone grey), smoky and an intense black. The straight-grained structure facilitates the composition, cutting and future replacement of kitchen doors.

R&R FINISH

A touch of the new in an elegant straight-grained structure; the matte visual effect combines tastefully with the frisé effect of the eucalyptus.

MELAMINE **BOREAL**

HOT NOW: OAKS IN NATURAL SHADES

The straight-grained structure facilitates the composition, cutting and future replacement of kitchen doors.

BOREAL FINISH

Pleasant to the touch peaks and troughs effect; features glossy-matte iridescence creating a natural veneer effect.

TRENDY MATERIALS WITH VERY DEEP TEXTURES

We enhance the tactility and beauty of natural veneer with very deep hypertextures. We have chosen oaks in their natural shade and walnut and combined them with different textures to satisfy the differing needs in modern kitchen design. These materials require subsequent varnishing or lacquering, thus increasing their decorative functions.

ESSENTIAL WHITE

White is represented in the kitchen sector with more than 80% of the total volume. This is because it is a timeless colour, easy to combine and that fills any room with luminosity.

In terms of trends, warmer shades are gaining ground over the whites with hints of blue, pink and grey. The finishes are mainly matte, however, the gloss continues to have its space. For all this we have made a selection of whites that ranges from very neutral tones to bony tones, with different types of finish: Balm, Ideal Matt and Ideal Glow.

MELAMINE BLM

FINISH BALM

It is barely glossy, yet is warm and clean to the touch. It replicates a very soft and pleasant lacquered effect.
