Nonconformity is the engine of creativity

Finsa is a manufacturer of technical wood solutions that, throughout its almost 100 years of history, has evolved to become a reference brand in the sector. Over the years, the company has advanced, incorporating new materials and adapting to new times, always without losing its essence and its core values of sustainability and design.

Finsa has a team of Technical Consultants whose job is to advise and accompany professionals in the areas of architecture, interior design and project design, informing them in all matters relating to wood products and wood derivatives.

In this digital book, you can browse some of the most outstanding projects in the workplace industry over the last two years, where Finsa's materials are present in all the spaces.

We are committed to sustainability

Finsa brings together innovative tradition in wood processing and a deep respect for the landscape that has seen us grow. Thus, since 1931, we have been dedicated to industrial wood processing, gradually incorporating into our processes recycled wood and wood from rapidly renewable species.

The consumption of wood products offers a positive contribution towards preserving and increasing forests. That is why we actively encourage the use of wood from certified forests, whose sustainable management is ensured. It is our responsibility to strive for a path of development that is based on the renewal of resources and the protection of the environment.

Thanks to our production processes, and to the use of certified raw materials, we are able to manufacture solutions and/or products that meet the technical requirements and certifications required by today's market.
