Fintop Xtrim ultra-thin worktop sealer

Worktop sealant ensures better performance of the worktop and increases its resistance to moisture, by applying it in areas of higher risk such as joints or sink cutouts.

In addition, the treatment of the sealant applied to the side edges will allow them to be left visible, highlighting the HDF baseboard of our Fintop Xtrim range of countertops.

General product descriptions

Water-based coating formulated for use on wood or wood-derived substrates. Substrates treated with the sealant possess an extremely water-repellent character generated by methylpolysiloxane additives, which prevents the absorption of water traces, thus avoiding deformation due to volume variations and effectively increasing the useful life of the countertops.

Instructions for use

1. Sand the area to be sealed.
Remove any debris from the surface to be coated.

2. Shake vigorously the
Shake the sealant container before use.

3. Application of two
layers with a brush or paintbrush.

4. Review and clean up excess
with a damp cloth.

Storage

Always keep containers in places sheltered from possible frosts and away from direct sunlight.

Packaging

250g jar. Served in boxes of 25 units.
